Data Flash Library Type04 Package Ver.2.00 for the RL78 Family [for the CA78K0R/CC-RL Compiler]

Issue Date : 2019/1/21

Overview

- The Data Flash Library for the RL78 family is free software for re-programming data flash memories of RL78 family MCUs by user's program.
The Data Flash Library provides interface for operations such as erasing or programming on the areas of data flash memories that MCUs have.

    - Announcement about released: Tool News
    - Products Information: data sheet

- The Data Flash Library Type04 Ver.1.05 for the RL78 Family came in two types of packages depending on compiler: CC-RL or CA78K0R. We have integrated these two packages and revised the product on Jan. 21, 2019.
The package Ver.2.00 after integration includes Data Flash Library Type04 for the CC-RL compiler and CA78K0R compiler for the RL78 Family. The included Data Flash Programming Library for the RL78 Family has not been changed.
